

Guide

Setup

In VSCode install the extension:
Markdown Preview Enhanced

<https://marketplace.visualstudio.com/items?itemName=shd101wyy.markdown-preview-enhanced>

Editing

Open the file [HorizonTechnicalDoc.md](#) in VSCode.

Open the Markdown preview using:

Mac: cmd-k v

Windows: ctrl-k v

Generating the PDF

When you want to "generate the PDF" make sure the preview tab is open. Click this [≡] icon in the bottom right (you may have to hover there for it to be visible) and then click:

Export > Chrome (Puppeteer) > PDF

Guidelines

1. **TODO** - Use 'TODO' anywhere in the doc where there is an explicit question or issue that needs review. This makes it easy to search for 'TODO' throughout the doc.
2. **Entity, not Object** - Use "entity" instead of "object" unless referring to a place where Horizon specifically calls it an "Object".
3. **Sample code** - prefer technical explanation over example code. Write an example only when the example provides clarity that is hard to explain otherwise.

Info

Note that you can also edit in the preview pane!

The full docs are here:
